

Your space. Nobody else's.

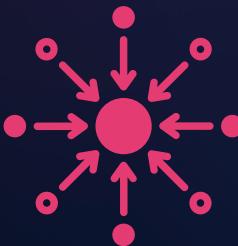

We are an open-source, user-controlled, encrypted, decentralized storage App for passwords, files & private data.

Pitch Deck

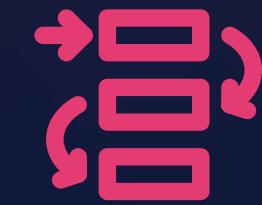

The Problem

The user does not have the whole **control** of his data.

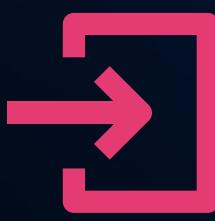

All the data is stored in **centralized data bases**.

The user depends on one **unique provider**.

Not very secure due to **centralization**.

We still have **centralized login**, more dependence.

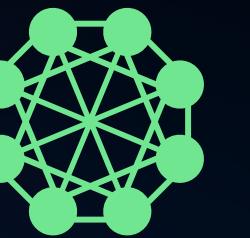

The users do not trust giving the data to **third parties**.

Solution

An application where users:

**Have the whole control of
their data, passwords & files.**

**Have their data stored
in a decentralized way.**

**Have their data highly
secured.**

**Do not depend on anyone
to interact with their info.**

Do not depend on anything or anyone to access their space, using decentralized access.

How? Blockchain & IPFS

Double decentralization system.

Using Blockchain to
ensure and decentralize
all the transactions.

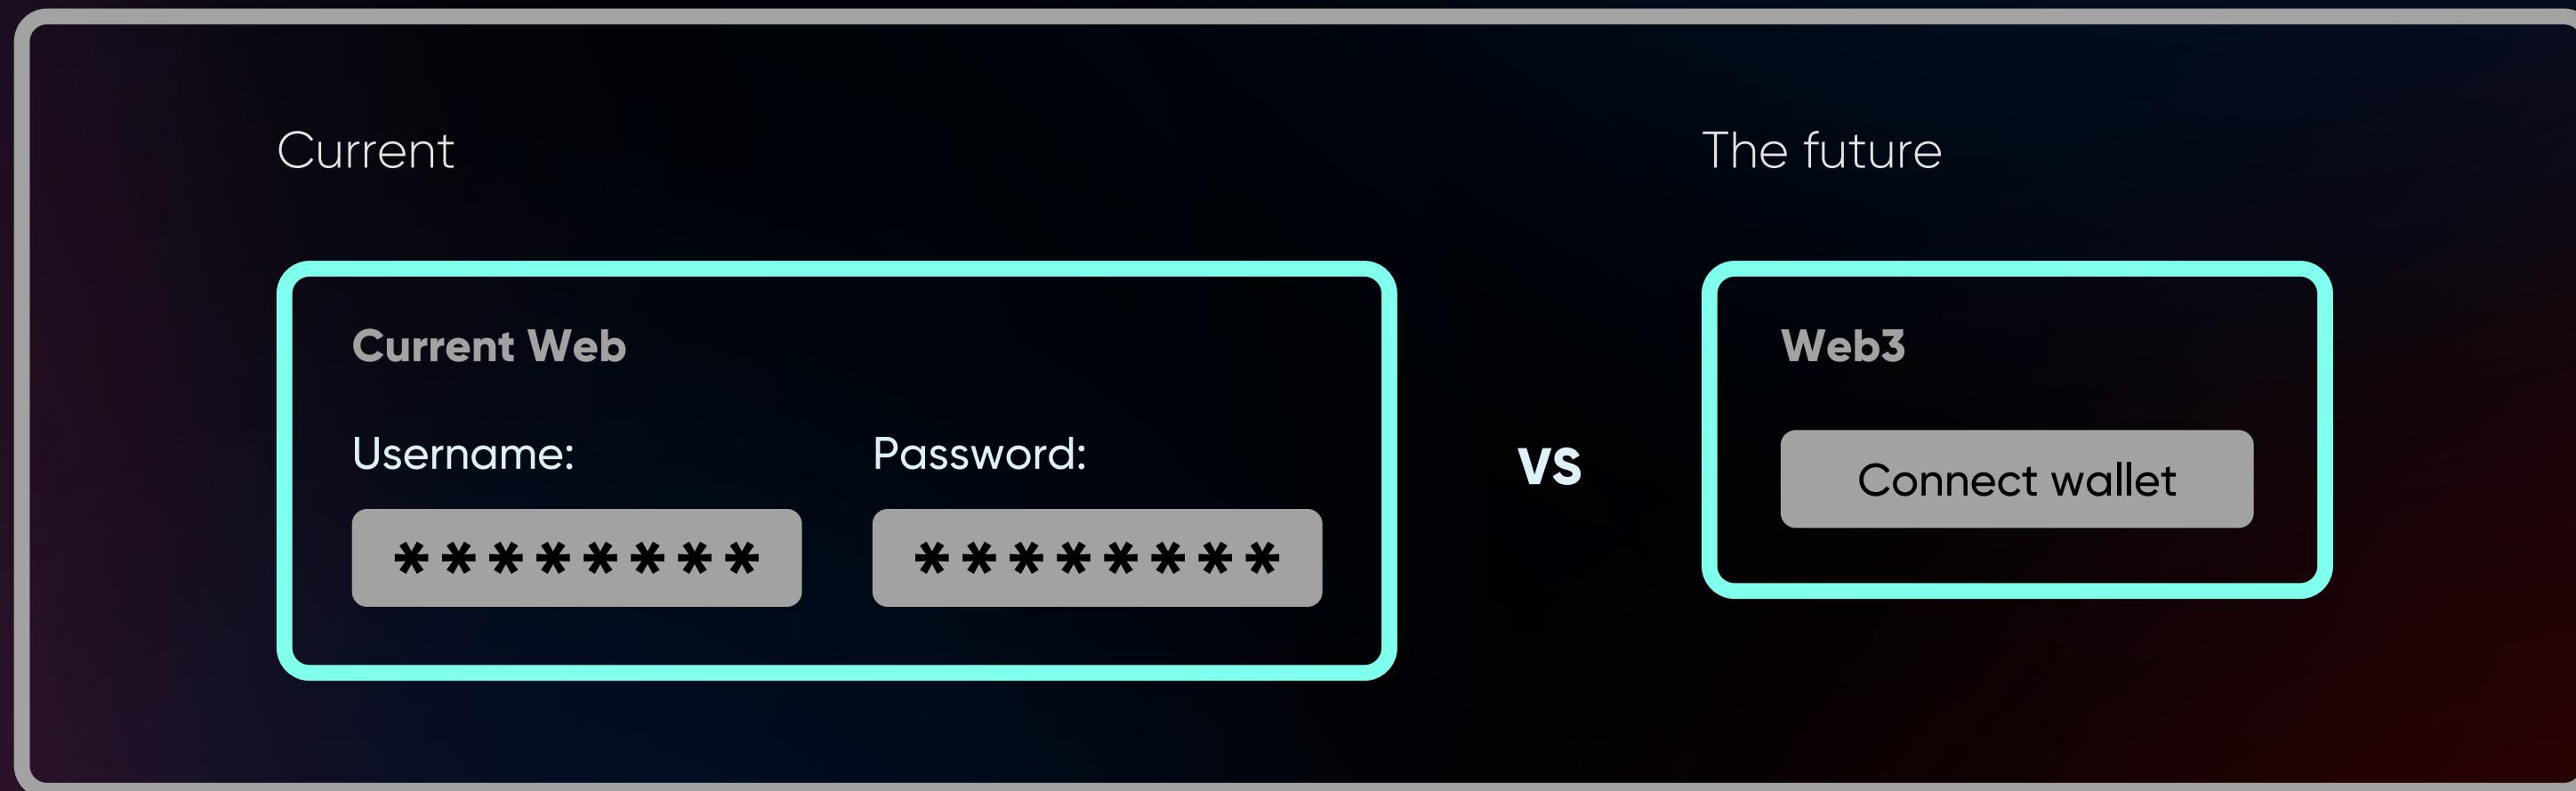

Using IPFS to
store all the data
and files.

Using Filecoin to
have even more
decentralization.

We are also a Web3 identifier

We have similar characteristics to those of a cryptographic wallet.

An App for iOS, Android & Web

Account import available

Multi-platform & Free download

Business Model

Freemium

Free

Limited interactions,
no files.

Basic

Infinite interactions,
only text, no files.

Premium

Infinite interactions,
text & files.

Downloads Roadmap

Competitors

FEATURES	Ounn	1Password	Bitwarden	Keeper	LastPass
Serves as a Web3 identifier	✓	✗	✗	✗	✗
Has an option to import account	✓	✓	✓	✓	✓
Has the App in the market	✗	✓	✓	✓	✓
Uses decentralized storage	✓	✗	✗	✗	✗
Supports files	✓	✗	✓	✓	✗
Has decentralized Login	✓	✗	✗	✗	✗
Open-source	✓	✗	✓	✗	✗
User-friendly	✓	✓	✗	✗	✓

Competitive Advantages

One in all

Only one person has access to the space and tools.

Anonimity

Nobody not even us can enter your space.

Transparency

Due to our open-source code everyone can see what we are.

Decentralization

Decentralized storage and login due to blockchain & IPFS.

Security

Thanks to Encryption algorithms & Cryptography.

Scalability

With blockchain & IPFS is very easy to scale and grow.

Advancement

On-chain tools of the highest value are provided.

Adoption

We are accessible to any kind of user.
